Large-Step Semantics

Again, three relations, one for each syntactic category:

$$\Downarrow_{\mathbf{Aexp}} \subseteq \mathbf{Store} \times \mathbf{Aexp} \times \mathbf{Store}$$

$$\Downarrow_{\mathbf{Bexp}} \subseteq \mathbf{Store} \times \mathbf{Bexp} \times \mathbf{Store}$$

$$\Downarrow_{\mathbf{Com}} \subseteq \mathbf{Store} \times \mathbf{Com} \times \mathbf{Store}$$

Large-Step Semantics

$$\frac{}{\langle \sigma, n \rangle \Downarrow n}$$

$$\frac{\sigma(x) = n}{\langle \sigma, x \rangle \Downarrow n}$$

$$\frac{\langle \sigma, e_1 \rangle \Downarrow n_1 \qquad \langle \sigma, e_2 \rangle \Downarrow n_2 \qquad n = n_1 + n_2}{\langle \sigma, e_1 + e_2 \rangle \Downarrow n}$$

Large-Step Semantics

$$\text{While-F}\ \frac{\langle \sigma, b \rangle \Downarrow \textbf{false}}{\langle \sigma, \textbf{while}\ b\ \textbf{do}\ c \rangle \Downarrow \sigma}$$

$$\text{While-T}\ \frac{\langle \sigma, b \rangle \Downarrow \textbf{true} \qquad \langle \sigma, c \rangle \Downarrow \sigma' \qquad \langle \sigma', \textbf{while}\ b\ \textbf{do}\ c \rangle \Downarrow \sigma''}{\langle \sigma, \textbf{while}\ b\ \textbf{do}\ c \rangle \Downarrow \sigma''}$$

Command Equivalence

Intuitively, two commands are equivalent if they produce the same result under any store...

Definition (Equivalence of commands)

Two commands c and c' are equivalent (written $c \sim c'$) if, for any stores σ and σ', we have

$$\langle \sigma, c \rangle \Downarrow \sigma' \iff \langle \sigma, c' \rangle \Downarrow \sigma'.$$

Command Equivalence

For example, we can prove that every **while** command is equivalent to its unfolding:

Theorem

*For all $b \in$ **Bexp** and $c \in$ **Com** we have*

$$\textbf{\textit{while}}\ b\ \textbf{\textit{do}}\ c \sim \textbf{\textit{if}}\ b\ \textbf{\textit{then}}\ (c; \textbf{\textit{while}}\ b\ \textbf{\textit{do}}\ c)\ \textbf{\textit{else skip}}.$$

Proof.

We show each implication separately... $\square$
